**DETAILED ACTION**

***Status of the Claims***

This communication is in response to the amendment filed on 06/29/2010.  
Application No: 10/748981.

***Allowable Subject Matter***

1. Claims 1-6,8-14 and 16-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The reason for allowance is based on the prior arts of record fail to teach the limitations in combination with the underlined limitations of claim 1 as summarized below:  
Applicants' independent claim 1: The present in invention is directed to a System for handover, the independent claim identifies the patentably distinct feature, "A method comprising: storing in a terminal connection settings and network identifiers, wherein at least one network identifier of the stored network identifiers is associated with at least some alternative connection settings, the network identifier identifying a target network reachable by a connection from the terminal and wherein the connection settings are grouped as alternative groups of connection settings such that at least one network identifier is associated with each group.  
comparing, in the terminal, a current network identifier identifying a target network of a current connection of the terminal and associated with the currently applied at least one connection setting to the stored network identifiers of different groups associated with other available connection settings,

Selecting group of connection settings associated with a network identifier that is the same as the network identifier associated with the currently applied at least one connection setting for a new connection, and

Carrying out a handover related function to continue providing access to the target network via a new access point by using the selected group of connection settings. “

Applicant's independent claim 1 comprises a particular combination of elements, which is neither taught nor-suggested by prior art in combination of other limitation recited in claims 9, 17 and 19.

#### **The prior art of record**

4. The prior art of record teaches the claimed invention substantially, but fails to teach or suggest singly or in combination, either expressly or inherently all the elements of the claim invention.

5. Haverinen teaches comparing a list of received network identifiers (PLMN IDs) against a list of stored network identifiers. Haverinen describes receiving a list of available PLMN IDs and selecting a PLMN ID from those that also appear on a list of stored, allowed PLMN IDs in order to roam to an allowed PLMN ID.

6. Blatherwick teaches dropping a connection setting associated with a currently active access point.

7. However, above combined prior arts fail to teach the claimed information, specifically, Haverinen has not been shown to teach or suggest using a network identifier currently in use (a current network identifier associated with a currently applied connection setting). Therefore,

Haverinen has also not been shown to teach or suggest selecting a connection setting associated with the same network identifier as is associated with the currently applied connection setting.

### **Conclusion**

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance."

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mahendra Patel whose telephone number is 571-270-7499. The examiner can normally be reached on 9:30 AM to 5:30 PM EST.
